DEVBHOOMI TEMPLE FLOWERS REPROCCSSING PROJECT

Management Meeting Review of Product Testing & safety System

The management review meeting facilitates open discussions on achievements, challenges, and potential opportunities. Through the review of Product Testing and safety, the Meeting aims to enhance overall review of Product testing And safety. It acts as a platform to drive continuous improvement initiatives, address emerging

MRM Date	
Meeting Agenda	**Discussions & Actions Planned**
Product Testing Review	1. **Testing Requirements by Buyer** • Keep checking the buyer testing requirements, and conduct it from Inter tek or SGS, Make a list of testing requirements and identify which agency can do the same. • Maintain records of testing 2. **Equipment** Find out if we can purchase test equipment for in house testing, there is subsidy for the same
Outcome of MRM	**Buyer Testing Requirements:** Buyer-specific testing requirements are being continuously monitored, and all necessary tests are being conducted through approved agencies such as Intertek and SGS. A consolidated list of required tests has been prepared, clearly identifying the suitable testing agencies for each requirement. Testing records are being properly maintained, ensuring traceability and compliance with buyer standards. **Use of NABL Accredited Agencies:** Product testing is consistently being carried out through NABL-accredited agencies, allowing the organization to maintain high testing reliability while availing applicable subsidies. This practice is effectively supporting cost efficiency and compliance with regulatory and buyer expectations. **Testing Equipment & In-House Capability:** A review of in-house testing capability has been conducted, and options for purchasing relevant test equipment have been explored. Subsidy benefits for installing such equipment have been identified. The feasibility assessment

Prepared by	Checked by

	indicates that acquiring in-house testing tools will strengthen product safety controls, reduce external dependency, and support faster testing turnaround in the future.
