ENERGY AUDIT CHECKSHEET

(For a systematic audit of all areas of organization to identify and priorities the areas organization can save energy and money. Some observations may be rectified by simply communicating with staff and changing some practices, where others may require repair / replacement of equipment or new installations)

Audit Date:	
Audit observations:	Maintains its power factor above 0.90 and uses all energy efficient lights and equipment. Minor observations like door closing and lighting policy needs to take care.
Next Audit Due	

Energy Efficiency Check list:

Heating, ventilation, and air-conditioning (HVAC) equipment	**Yes/No**	**Observation**
Is power factor more than 0.9?	YES	Overall energy management practices are in place
Is the system regularly serviced/maintained?	YES	Overall energy management practices are in place
Have variable speed drives been fitted where possible?	YES	Overall energy management practices are in place
Are all heat emitters such as radiators, fan units and storage heaters unobstructed	NO	Overall energy management practices are in place
Are there any areas of over or under heating?	NO	Overall energy management practices are in place
Is there a risk of heating and cooling operating in the same area?	NO	Overall energy management practices are in place
Are any unoccupied areas being heated?	NO	Overall energy management practices are in place
Are windows and doors often left open in air-conditioned	NO	Overall energy management

spaces?		practices are in place
Are ventilation fans properly maintained and cleaned?	YES	Overall energy management practices are in place
Is the air-conditioning used below 24°C?	NO	Overall energy management practices are in place
Are windows left open in air-conditioned spaces?	NO	Overall energy management practices are in place
Building fabric	**Yes/No**	**Observation**
Are there signs of dampness anywhere?	NO	Overall energy management practices are in place
Are windows at least double-glazed or secondary glazed?	NO	Overall energy management practices are in place
Are there any air leaks at windows and doors or other openings?	NO	Overall energy management practices are in place
Are windows and roof lights clean?	YES	Overall energy management practices are in place
Do all doors close automatically and quickly?	YES	Overall energy management practices are in place
Is the space available used in an efficient way?	YES	Overall energy management practices are in place
Are there any areas of solar gain? Is this capitalized on or does it cause an overheating issue?	NO	Overall energy management practices are in place
Lighting: lamps	**Yes/No**	**Observation**
Are there any areas of over-lighting or under-lighting?	NO	Overall energy management practices are in place
Are there any tungsten lamps still in use (for example, in desk lights)?	NO	Overall energy management practices are in place
Have T12 or T8 fluorescent lamps been replaced by lower energy alternatives?	YES	Overall energy management practices are in place
Can light output be reduced in any exterior lamps?	NO	Overall energy management practices are in place
Are lamps and reflectors/shades dirty or discolored?	NO	Overall energy management practices are in place
Lighting: controls	**Yes/No**	**Observation**

Are there any unused areas being lit?	NO	Overall energy management practices are in place
Are there large banks of lighting controlled by single switches?	NO	Overall energy management practices are in place
Can daylight sensors be fitted to lights adjacent to windows?	YES	Overall energy management practices are in place
Are windows and skylights cleaned regularly?	YES	Overall energy management practices are in place
Are manual switches accessible and clearly labeled? Are staff aware of which switches control which lights?	YES	Overall energy management practices are in place
Is there a switch-off policy in place?	YES	Overall energy management practices are in place
Compressed air	**Yes/No**	**Observation**
Are compressed-air leak checks carried out regularly and any leaks fixed?	YES	Overall energy management practices are in place
Is compressed air used only where there are no other alternatives?	YES	Overall energy management practices are in place
Is the compressor taking in the coolest possible air?	YES	Overall energy management practices are in place
Is the compressor only switched on when there is demand for compressed air?	YES	Overall energy management practices are in place
Electric motors	**Yes/No**	**Observation**
Is all driven machinery serving a useful purpose?	YES	Overall energy management practices are in place
Are any motors left running when the process demands have stopped?	NO	Overall energy management practices are in place
Are inverters or variable speed drives used for any motors?	NO	Overall energy management practices are in place
Are motors kept clean? (When their cooling fins are kept clean, motors run cooler, more efficiently)	YES	Overall energy management practices are in place
Other equipment	**Yes/No**	**Observation**
Is all equipment as new and energy efficient as possible?	YES	Overall energy management practices are in place

Does all IT equipment have energy saving features enabled?	YES	Overall energy management practices are in place
Is all other equipment switched off when not in use?	YES	Overall energy management practices are in place
Is all refrigeration equipment A-rated or better?	YES	Overall energy management practices are in place
