ENERGY SAVING TARGET RECORD

Target period	
Energy source	**ELECTRICITY**
Baseline consumption	
Target reduction	
Actual saving	
Achievement Status	**UNDER PROGRESS**
Strategies implemented	Implement energy-efficient motors, process optimization, LED lighting, heat recovery, and employee training to reduce energy consumption and improve efficiency.

Plans to reduce energy consumption	upgrade to energy-efficient motors, VFDs, and heating/cooling systems; optimize processes, cycle times, and preventive maintenance; implement energy monitoring, LED lighting, HVAC efficiency, and employee training; and integrate renewable energy sources like solar or waste-to-energy. These measures lower electricity costs, carbon footprint, and improve production efficiency.
Notes	Implement energy-efficient motors, process optimization, LED lighting, heat recovery, renewable energy, and employee awareness to reduce electricity consumption and improve efficiency.

ENERGY COMSUMPTION MONITORING RECORD

Source of Energy Electricity

S. No	Month	Recorded Unit	Amount (Rs)	Action required
1	June 26			Optimize
2	July 26			Optimize
3	Aug 26			Optimize
4	Sep 26			Optimize
5	Oct 26			Optimize
6	Nov 26			Optimize
7	Dec 26			Optimize
