QUALITY TRAINING CONTENTS

QUALITY POINT DISCUSS WITH PRODUCTION AND QUALITY TEAM DURING TRAINING

1. Quality Standards & Expectations

- **Production Team**: Focus on understanding quality metrics (defects, yield, scrap rates), adhering to tolerances, and machine calibration.
- **Quality Team**: Ensure product meets industry standards (e.g., ISO 9001) through regular audits, feedback, and root cause analysis.

2. Communication Between Teams

- Establish clear channels for reporting issues, sharing feedback, and resolving quality concerns using standard forms (e.g., NCRs, CAPAs).
- Regular meetings for problem-solving and process updates.

3. Process Control and Monitoring

- **Production**: Monitor machine setup, maintenance, and parameter settings.
- **Quality**: Implement real-time monitoring with tools like SPC and ensure correct dimensional checks.

4. Defects & Corrective Actions

- **Production**: Detect defects early and decide between rework or scrap.
- **Quality**: Lead root cause analysis and ensure corrective and preventive actions (CAPA) are implemented.

5. Documentation & Traceability

- Maintain accurate records for all production and quality checks.
- Adhere to ISO standards for traceability, and document non-conformance and corrective actions.

6. Measurement & Inspection Tools

- Train on the proper use and calibration of measurement tools (calipers, micrometers, CMM).
- Regular calibration and reliable tools ensure consistent quality checks.

7. Continuous Improvement

- **Production & Quality Teams**: Embrace continuous improvement (e.g., Kaizen, Lean) and problem-solving tools like 5S and value stream mapping.
- Empower employees to contribute to quality through feedback and suggestions.

8. Safety and Risk Management

- Ensure quality processes do not compromise safety. Both teams should collaborate on risk assessments to prevent accidents and improve machine safety.

9. Performance Evaluation & Feedback

- Monitor and evaluate team performance using quality metrics.
- Use customer feedback to improve processes and products.
